Engineer Position for a new Technology for Controlled Organoid Growth

The Cell Physics Lab. in Strasbourg designed a new method to grow organoids. The project enters a new phase and we look for a motivated Engineer to drive the project towards the market.

The Engineer will be in charge of designs and major strategies for tests with a team composed of scientists and business developers. Depending on the candidate, the next steps could lead to the creation of a start-up or to a co-development with a Company.

Candidates can be trained in biology or in physics.
